

Enabling data driven workforce strategies

Workforce Insights | Quickscan
Workforce data maturity assessment
2025

Introduction

Our objective

Enabling data driven workforce strategies to manage workforce risk, access the required skills and capabilities and optimize workforce cost.

Our unique selling point

By combining workforce strategy and data science expertise and experience, we are uniquely positioned to provide you with actionable insights into your total workforce

Do you know what you don't know about your workforce?

Employees

Individuals on your payroll who are providing services directly to you under the direction and control of your management.

Temporary workers

Individuals on third party payroll, selected and engaged on a temporary basis by you. Under your supervision and integration into your organization

Independent contractors (freelancers)

Self employed individuals, selected and engaged for their specific skills. Under your supervision and integration into your organization only where appropriate and necessary during their limited engagement.

Outsourced services and (SOW) projects

Processes and recurring activities fully outsourced to strategic partner. Outcome based, project and/ or long term contracted. Supplier is responsible for the selection and supervision of the worker.

Know your workforce ecosystem?

Understanding your total workforce ecosystem in terms of:

- 1 Policy & Strategy
- 2 Processes E2E
- 3 Systems and data
- 4 Governance

... helps to reduce total workforce cost & risk, improve access to required skills & capabilities and improve user experience.

Start with the quick scan!

Deliverables Quickscan

We assess & deliver a comprehensive report:

Ranking against 5 assessment criteria

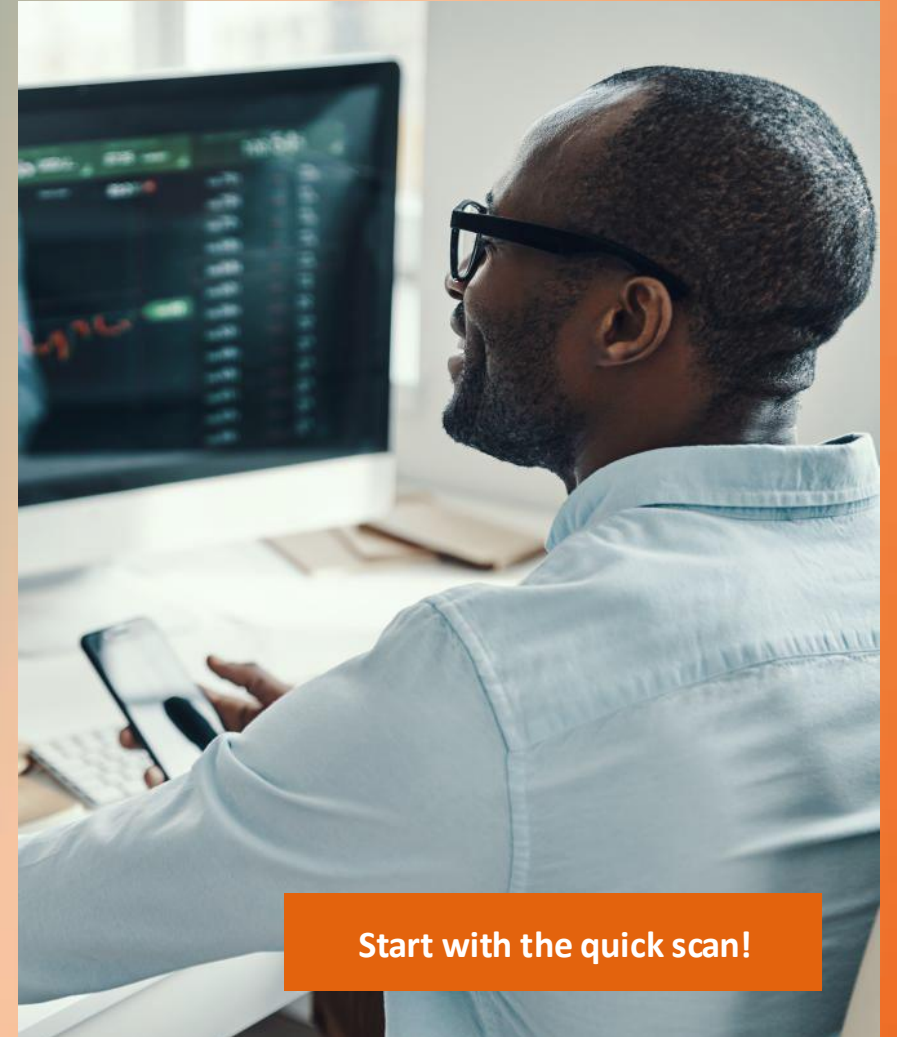

Ranking on Data maturity model

Recommendations (+ impact vs. effort analysis)

This provides actionable insights for improving the organization's (total) workforce data management and decision-making capabilities.

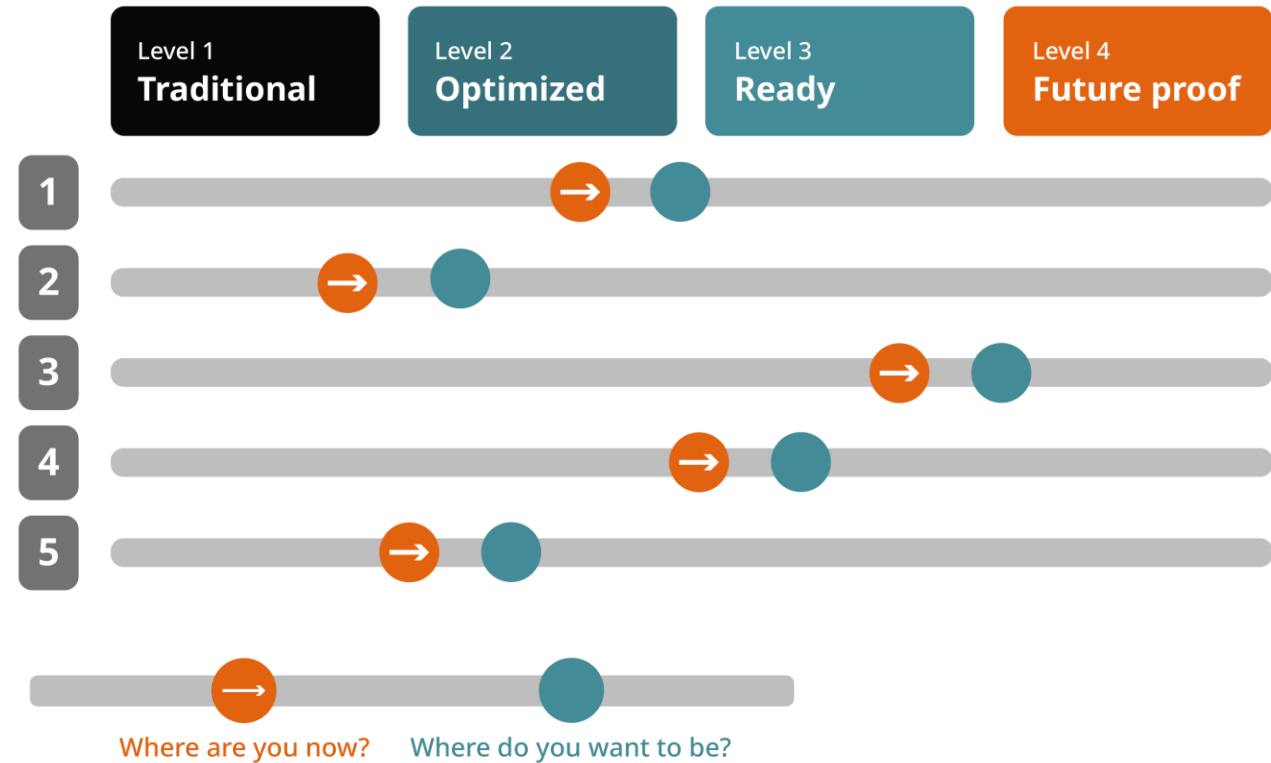

Start with the quick scan!

1. Data assessment criteria ranking

The objective of the Quickscan is to gain insights into the current state of your workforce data. This starts with answering the following questions:

- 1 Availability
- 2 Scalability
- 3 Usability
- 4 Quality
- 5 Security

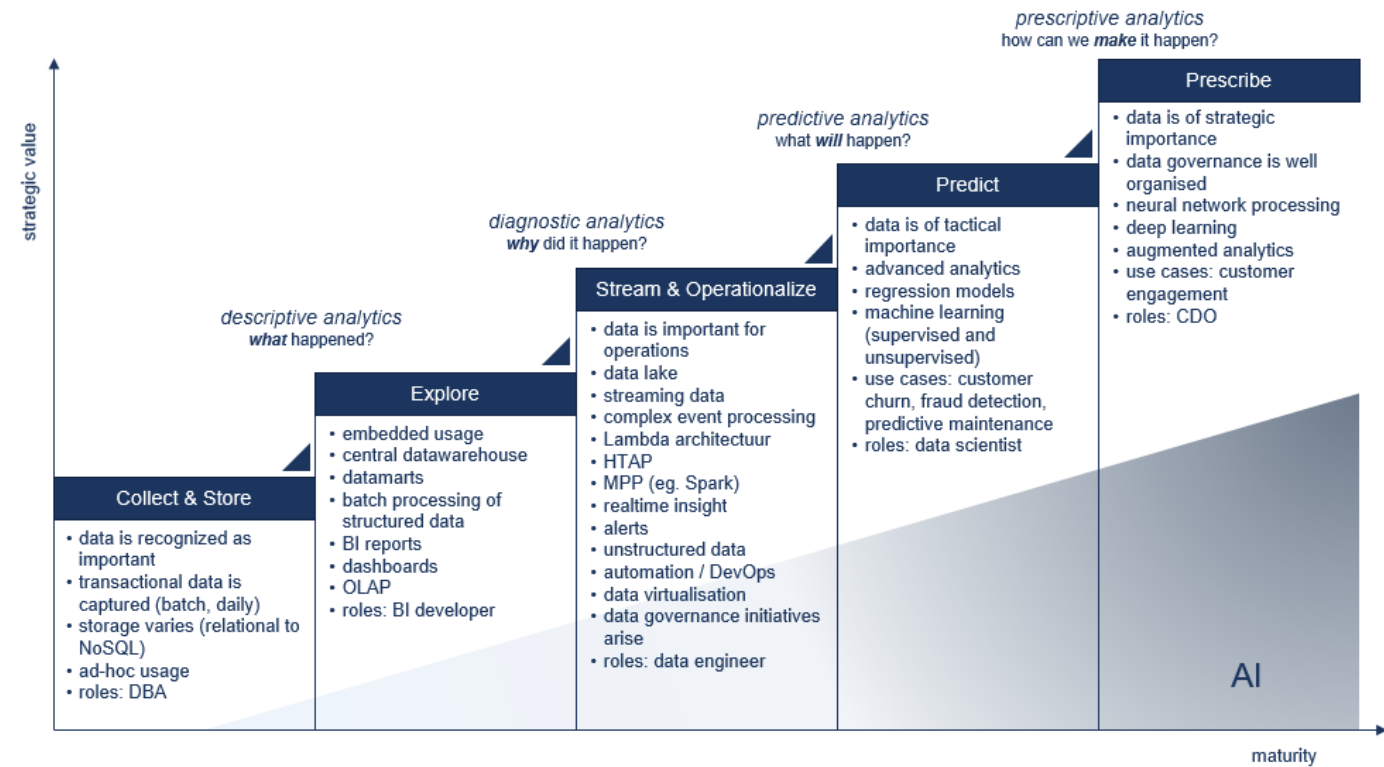

2. Data maturity model ranking

The objective is to assess and determine the level of maturity of your organization's data management.

The data maturity model indicates the strategic value you can expect based on the maturity of your organization's data infrastructure.

Based on the data assessment criteria, your company will be ranked on the model.

3.Recommendations & impact vs. effort

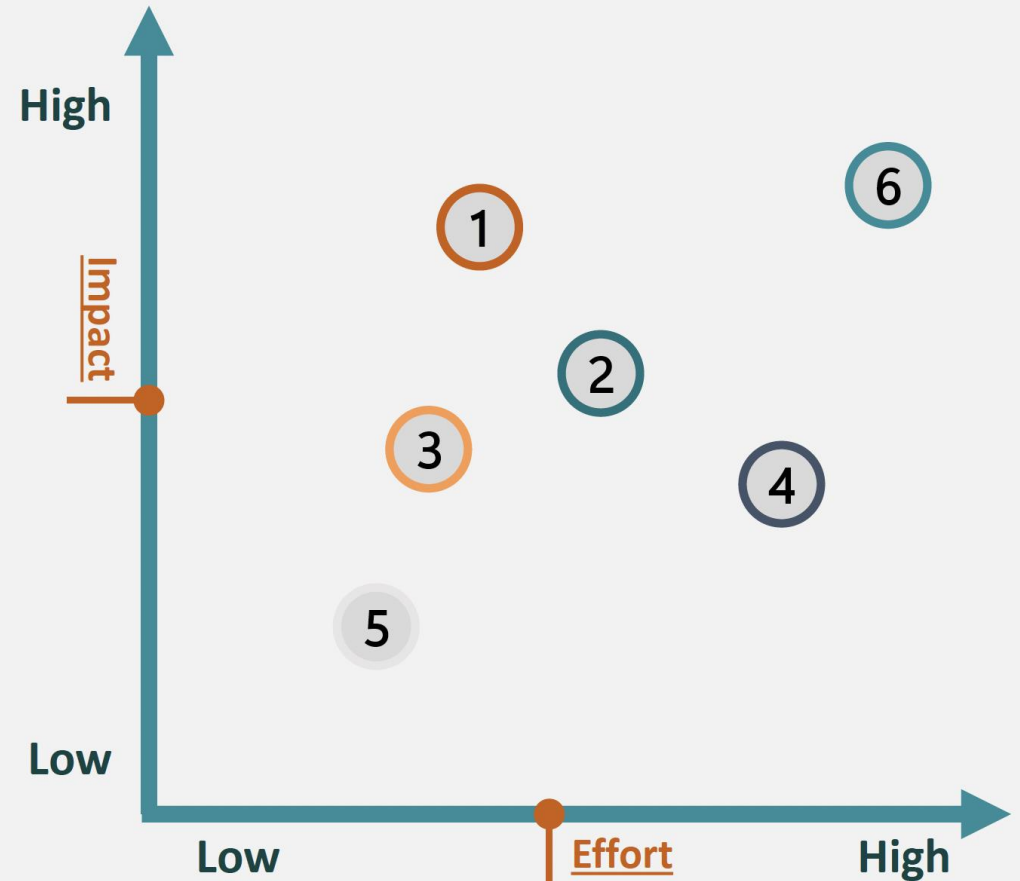

As a result of the Quickscan, Workforce Insights will suggest a set of recommendations to improve your workforce data infrastructure.

All recommendations will be plotted on an impact vs effort matrix.

- Recommendation 1: ...
- Recommendation 2: ...
- Recommendation 3: ...
- Recommendation 4: ...
- Recommendation 5: ...
- Etc.

Impact: how much impact will the recommended change make on the organization?

Effort: how much effort is required to realize the recommended change?

Projectplan

Business Understanding

Understanding the current business processes related to workforce data.

- 1 Identifying relevant stakeholders
- 2 Interviews with stakeholders (e.g. IT, HR, procurement, business)
- 3 Deep dive sessions

Data understanding

Understanding the current data infrastructure and visualizations.

- 1 Data collection
- 2 Analyzing the current data architecture
- 3 Analyzing the current data visualizations and dashboards
- 4 Data & architecture assessment

Recommendations

Reporting on findings and advise on improving workforce data infrastructure.

- 1 Ranking assessment criteria
- 2 Ranking data maturity model
- 3 Develop recommendations for improving workforce data infrastructure
- 4 Presenting the recommendations

Customer requirements

To successfully complete the Quicksan, the client needs to provide the following:

- Access to data sources and BI environment: To conduct a thorough analysis
- Business goals and objectives: Tailor recommendations to meet the needs
- Availability key stakeholders and decision-makers: For alignment of recommendations and communication
- Technical constraints and requirements: For developing realistic and feasible recommendations

Thank you!

Out of scope

Regarding the Quickscan, the following points are considered out of scope. Implementation of the points below are possible in a follow-up project:

- Implementation of the recommended changes: The Quickscan is focused solely on the analysis of the current data infrastructure and does not include the actual implementation of suggested recommendations.
- Training and support: We will provide recommendations and suggestions for improvement, but any training or support required to implement these suggestions will be out of scope.
